EDUCATION

The George Washington University

Bachelor of Science in Data Science

Washington, DC

Expected May 2026

- **Concentration:** Biotechnology
- **Minor:** Biology
- **Relevant Coursework:** Bioinformatics / Data Mining / Data Warehousing / Data Visualization

WORK EXPERIENCE

UMD Applied Research Laboratory for Intelligence and Security (ARLIS)

College Park, MD

Research Assistant

September 2025 – present

- Expanding previous research into a quantitative intelligence framework for mapping and forecasting emergent adversarial capabilities in biotechnology.

UMD Applied Research Laboratory for Intelligence and Security (ARLIS)

College Park, MD

Intern, RISC Program

June 2025 – August 2025

- Led a 10-week applied research sprint for a U.S. government sponsor, designing and executing a data-driven analysis on emerging technology trends.
- Built a full analytic pipeline from scratch; identified reliable data sources, engineered datasets, and conducted exploratory and quantitative analyses to inform sponsor decision-making.
- Delivered a 35+ page technical report and briefed key findings to senior-level officials, including the director of a federal technical analysis center; earned top evaluations and selected to extend project beyond initial term.

Proxy Foods

Washington, DC

Data Science and Data Engineering Intern

March 2024 – April 2024

- Extracted and transformed diverse data types from unstructured databases using advanced language model prompts; employed MySQL for dataset modifications and validated referential integrity.
- Architected and programmed two automated techniques to aggregate data; worked in close collaboration with AI/ML engineers to deliver relevant and ready datasets to train proprietary models.

GW Milken Institute School of Public Health

Washington, DC

Research Assistant, Dept. of Prevention and Community Health

July 2023 – Feb. 2024

- Co-authored a systematic review published in *Sustainability* that developed a data-driven policy framework to evaluate industrial agrifood systems and identify leverage points for sustainable reform. [↗](#)
- Screened and analyzed 3,300+ studies using Covidence, ensuring methodological accuracy and synthesizing evidence into actionable insights for global health and equity policy.

PERSONAL PROJECTS

Linux Development Environment Build-out

October 2024

- Installed and configured data science workstation on Debian Linux. Ingested, structured, and standardized large dataset into relational database, ran a statistical model in Python to derive actionable insights, presented through data visualizations.

Portfolio Website [↗](#)

September 2024

- Acquired DNS domain, configured records for use with GitHub Pages and Proton Mail.
- Modified HTML/CSS according to personal brand.

Other Projects

- Nucleotide frequency calculator [↗](#) - R script to calculate all samples across a FASTA file.

SKILLS

Languages, libraries, & tools: Python (Pandas, numpy, Matplotlib, SeaBorn, SciPy, sci-kit learn, Jupyter); R (ggplot2, lattice); HTML/CSS/JavaScript; SPSS; MariaDB/MySQL; MongoDB; Neo4j; Unix

Bioinformatics: MEGA, BLAST, CLUSTALW, Genbank
