EDUCATION

The George Washington University

Bachelor of Science in Data Science

Washington, DC, USA

Expected May 2026

- **Concentration:** Biotechnology
- **Relevant Coursework:** Data Warehousing / Data Mining / Data Visualization / Data Ethics / Bioinformatics

WORK EXPERIENCE

UMD Applied Research Laboratory for Intelligence and Security (ARLIS)

Student Researcher

College Park, MD, USA

September 2025 – February 2026

- Expanded previous research into a quantitative intelligence framework for mapping and forecasting emergent adversarial capabilities in biotechnology.

UMD Applied Research Laboratory for Intelligence and Security (ARLIS)

Research Intern, RISC Program

College Park, MD, USA

June 2025 – August 2025

- Led a 10-week applied research sprint for a U.S. government sponsor, designing and executing a data-driven analysis on emerging technology trends.
- Built a full analytic pipeline from scratch; identified reliable data sources, engineered datasets, and conducted exploratory and quantitative analyses to inform sponsor decision-making.
- Delivered a 35+ page technical report and briefed key findings to senior-level officials, including the director of a federal technical analysis center; earned top evaluations and selected to extend project beyond initial term.

Proxy Foods

Data Science and Data Engineering Intern

Washington, DC, USA

March 2024 – April 2024

- Extracted and transformed diverse data types from unstructured databases using advanced language model prompts; employed MySQL for dataset modifications and validated referential integrity.
- Architected and programmed two automated techniques to aggregate data; worked in close collaboration with AI/ML engineers to deliver relevant and ready datasets to train proprietary models.

GW Milken Institute School of Public Health

Research Assistant, Dept. of Prevention and Community Health

Washington, DC, USA

July 2023 – Feb. 2024

- Co-author on a peer-reviewed publication in *Sustainability* which develops a data-driven policy framework to assess industrial agrifood systems and identify leverage points for sustainable reform. [↗](#)
- Manually evaluated 3,300+ studies using Covidence, ensuring methodological accuracy and synthesizing evidence into actionable insights for global health and equity policy.

PERSONAL PROJECTS

Development Infrastructure Build-Out

February 2026

- Built data science workstation on RHEL. Installed and configured Oracle Database 26ai and built storage and retrieval pipelines, in pursuit of *Oracle Database Administrator Certified Associate (OCA)*.

Logistics Modelling and Simulation

January 2026

- A research-based simulation model for defence cargo transportation resilience to the Baltic States, factoring in modes of transportation, outages, and efficiency. Leveraged NetworkX and SimPy libraries.

Portfolio Website [↗](#)

September 2024

- Acquired DNS domain, configured GitHub Pages and Proton Mail; modified HTML/CSS according to personal brand.

SKILLS

Languages, libraries, & tools: Python (Pandas, numpy, Matplotlib, SeaBorn, SciPy, simpy, sci-kit learn, NetworkX, Jupyter); R (ggplot2, lattice); HTML/CSS/JavaScript; SPSS; MariaDB/MySQL; MongoDB; Neo4j; Bash
Bioinformatics: MEGA, BLAST, CLUSTALW, Genbank
